

DP Cappuccino Espresso chooses PortaDrink™

DP Cappuccino Espresso has selected PortaDrink carriers to improve take-away service and convenience at its UK café bars.

The company chose PortaDrink after searching for a carrier which was cost effective, eye-catching, safe, user-friendly, space efficient and environmentally sustainable, recyclable and biodegradable.

PortaDrink is a two or four-cup carrier made from natural 'Frovi Carry' coated unbleached paperboard. The material is light, strong and offers excellent wet and tear strength properties - vital for a safe and sturdy hot drinks carrier - and is supplied from managed forests with Forestry Stewardship Certification, which means that the raw material is sourced in an

environmentally responsible and sustainable manner.

Barry Clevely, DP's managing director, said, "The cup carriers have been well received by staff and customers because they have provided convenience and improved service whilst helping to raise awareness of our responsible approach to coffee supply."
